

# DMX RGB CONTROLLER

A RGB DMX controller which is designed to manage most RGB LED products, supporting standard DMX512 protocol & grey scale adjustment.

With 28 pre-programmed colour changing patterns it creates stunning effects whether in static, scrolling or jumping mode – robust and easy to use. The colour cycle produces over 1 million different shades and with 256 brightness levels you can also control the brightness according to your requirements. An extra feature is the built-in perpetual calendar and system clock and so you can pre-set to play different programmes anytime!

The LCD screen on the controller offers an easy and visible managing method of programme, mode and speed; the mounting bracket will enable easy fixing. Suitable for use with 12V and 24V products. The remote controller has a 100m range.

XLR-3 pin & RJ45 input ports. If further capacity is required it can easily be linked to our RGB Extension module.

CE Certificate & RoHS Compliant
